

Case Study

Background

Paras Health, Gurugram is the flagship institution of the Paras Health network. Since establishment in 2006, it has earned acclaim as Gurgaon's premier healthcare provider. The Critical Care unit at Paras Health Gurugram is led by renowned Dr Nitin Jain. A critical care leading light, it stands as a beacon of unwavering support in management of complex and life-threatening conditions.

Problem in need of an answer

While transitioning to electronic health systems the critical care team at Paras Health faced a real problem. Electronic devices for recording progress and instructions were not as handy as pen and paper. At the same time, efficient capture and consolidation of records had been a needed step towards modernization of discharge summary process and clinical analytics.

Solution and achievements

Dr Nitin and his team solved this through an innovative partnership with Medisha. Working closely, Medisha evolved a system to capture and transcribe clinical notes from paper. With no major change to any process, the discharge summary process was virtually automated. Process of capture of patient notes to generation of first draft now gets completed in 15 min.

"The system is simple to use, and works well in Indian context. Medisha has been an effective tool for my team."

Dr Nitin Jain, Head Critical Care, Paras Health

"Support from doctors, hospital management and support staff was crucial for successful rollout"

Dr Rishabh Bhandari, Medisha
